

N1 Global Fund (Japan) Launched in Partnership with Capital Partners Securities

15th Mar. 2008

N1 Fund is proud to announce the official launch of the N1 Global Fund Japan in partnership with Capital Partners Securities Co., Ltd.

The launch of this fund has been a result of many months of hard work. Japan has been of great interest to us for quite some time now. Globally, it is the 2nd largest economy and has a highly sophisticated financial system that rivals any city in the world. Japan is not only a challenging market for us, but one of the most important ones. Setting our sights on Japan is part of our vision in becoming a globally recognized financial company.

Due to N1's commitment to the Japanese market, it was critical to offer Japanese clients a stable investment product capable of generating consistent performance with low volatility, while also providing an alternative investment product uncorrelated to the traditional equity and fixed income markets. The result of this is the N1 Global Fund Japan.

Currently, this investment product is to be distributed as an onshore unit-trust to the Japanese investing public, licensed under the regulation of the Japanese financial authorities. It is structured as a feeder fund for the N1 Global Master Fund, managed utilizing the N1 Fund Allocator[©]™ strategy, a proprietary hedge fund selection tool which follows strict quantitative criteria.

N1 Global Fund Japan is an exclusive fund marketed and distributed in partnership with Capital Partners Securities Co., Ltd. To find out more information in subscribing to this fund, please visit <http://www.capital.co.jp/> for more details or your nearest Capital Partners Securities Co., Ltd. representative office.

N1 Fund is one of the leading European multi-strategy fund of hedge funds that serves retail, private, and institutional clients around the world. It is currently expanding its operations in the Asia Pacific region with its regional headquarters situated in Hong Kong, while Germany serves as its head office.
